

PNG POWER - Lae Power Station

LOCATION
Lae, PNG

DURATION
Feb 2006 - Jan 2007

VALUE
\$4 million

MAN HOURS
41,800

Project Overview

Lae LNG Power Station is located near Morobe Province, the second largest city in Papua New Guinea. ECM was awarded the electrical and instrumentation installation works for the extension to the existing standby power plant in Lae, PNG.

Local support played a large part in assisting ECM to complete the project in providing labour and assistance to manoeuvre equipment into place. ECM engaged approximately 25 PNG nationals throughout the duration of the project and provided considerable employment opportunities for the Lae population.

The completion of the 12MW power station was a step forward in providing an uninterrupted supply of power to the Lae people and in developing its regional centre.

Scope of Work

- Supply, installation, termination and commissioning of 11kV cables and associated transformers.
- Installation of cabling and terminations for associated generators (x3).
- Coordination of both local labour and expat supervision.
