

## LEIGHTON CONTRACTORS PTY LTD - Link Plates & Load Bearing Pins

LOCATION	DURATION	VALUE	MAN HOURS
Kwinana, WA	Dec 2011 - Jan 2012	\$0.7 million	400

### Project Overview

The Gorgon LNG Project at Barrow Island, Western Australia, required lifting plates to support the heavy lifting operations taking place during its execution. Lifting plates were needed to make sling lengths adjustable when lifting structures where the centre of gravity was asymmetrical to the lift points.

ECM was contracted by Leighton to fabricate, pack, test and deliver 24 x 275 tonne link plates and load bearing pins for the Gorgon LNG Project.

The link plates and load bearing pins were constructed in ECM's fabrication workshop in Kwinana and delivered to the Australian Marine Complex in Henderson for transportation to Barrow Island.

### Scope of Work

- Fabrication, packing, load testing and transportation of 24 x 275 tonne link plates and load bearing pins.
